

BAP UI™ + BAP Connector™

Security Ops & Compliance Command Center

What leaders get in 2-4 weeks

- Live Ops: risk gauge, incident feed, ownership, decision prompts, MTTD/MTTR visibility
- Compliance: exportable SOC2 / ISO 27001 / NIST CSF brief (PDF/CSV)
- Integrations: read-only to Splunk, CrowdStrike, Okta, Azure AD, AWS CloudTrail, Jira/ServiceNow

How it fits your stack

- Read-only keys, SSO (Okta/Azure AD/Google), RBAC, audit logs; least-privilege by default
- Deploy Managed (we host) or Private (your cloud) as a single container
- No data exfiltration—dashboards render directly from your data sources

Outcomes executives care about

- 10-minute behavior change: prompts that drive next actions
- Board-ready SOC2/ISO/NIST coverage and evidence pointers
- Time-to-detect/respond (MTTD/MTTR) tracked and owned

Packages

- Starter: 3 sources + SSO + compliance export (business-hours support)
- Pro: 6-8 sources + Jira/ServiceNow workflows + priority support
- Enterprise: private images, change-control, audit trails, SLA

If a dashboard doesn't change behavior in 10 minutes, it's noise. BAP UI™ moves the business.
